INTRODUCTION

Introduction & Purpose

The USA Historical AFV Register is intended to provide a cataloging of all of the historical Armored Fighting Vehicles (AFV), including tanks, APCs and self-propelled artillery, etc that are on preserved or otherwise displayed in museums or as monuments in the United States. As such the registry ranges from the World War I-era Skeleton Tank to modern M1 Abrams tanks. However, the registry is not intended to include modern AFVs that are still in service.

Format

The USA Historical AFV Register is organized by state and city or town as follows.

STATE

CITY OR TOWN

Location (GPS Coordinates)

AFV Model	Man./User	status	Notes and/or location

Man./User denotes the original manufacturer (country) and various users, using three letter country codes.

Status is denoted by one of the following codes.

ind = indoor display

out = outdoor display

std = stored (this can be either indoor or outdoor storage, but clearly not on display)

wre = wreck (typically vehicles recovered from a target range or simply in very bad condition)

Often, if there are a large number of AFVs on display in a particular town or military post, sub listings are also provided, organized by location - museum, building, road, etc.

Many of the vehicles listed as "Unconfirmed" are from the "Central Registry" of donated vehicles maintained by the U.S. Army's Tank-automotive and Armaments Command (TACOM). Many of these vehicles donated to American Legion and VFW Posts may actually be located in local parks. Additionally, many of the "Unconfirmed" World War II era vehicles – such as Sherman and Stuart tanks – have since been moved or may no longer exist.

Additional information about a particular vehicle is often included in footnotes.

Serial Numbers (SN) and Registration Numbers, aka "USA" numbers (RN) are given when available. Note that many M60 tanks have two SNs, the original one as built and an Anniston Army Depot (AAD) rebuild SN (which ends in an A) or a Mainz Army Depot (MAD) SN (which ends in an M). For British and Canadian WWII era vehicles, War Department (WD) Numbers are given when known, as are post-war Vehicle Registration Numbers (VRN) for British vehicles.

Sources

The USA Historical AFV Register is compiled from a number of sources. Firstly, the register is an expansion of Leslie Delsing's [Wrecks and Relics in the USA](#) tank registry, posted to the [AFV News Discussion Board](#) on 22 May 2006. The register has also been greatly expanded thanks to armyjunk2 and his copy of the TACOM Central Registry. Some of the other notable online sources include the Waymarking Military Ground Equipment Displays site, the former [Tanks for the Memories](#) geocaching site, [The Sherman Register](#), [Toadman's Tank Pictures](#), Trevor Larkum's Preserved Tanks, Robert Buettner's [War Memorials of Wisconsin](#), and Don Moriarty's [The History of the Ontos](#) as well as forums and message groups such as the [AFV News Discussion Board](#), [G104](#) (the Sherman Register mailing list), [G103](#) (dedicated to Stuart tanks), and [G136](#) (dedicated to M8 Greyhound and M20 armored cars). Where possible, the origin of information on a particular vehicle is denoted in footnotes. A large number of individual contributors, many of which are credited throughout the registry, have provided invaluable information.

Note

All Serial Numbers, Registration Numbers, War Department Numbers, Vehicle Registration Numbers, etc come from the public domain or directly from the owner with permission. Public domain includes publicly visible areas of the vehicle (commonly stamped or marked on the exterior) when on display, data plates if visible/open to display, or other public domain forums and sources (such as reference works, the AFV News Discussion Board, G104, Sherman Register, etc).

Special thanks

Special thanks goes to Pierre-Olivier Buan and Silvio Iacuone, who took the time to check this version for errors and added both valuable information.

⁵⁰ The museum specimen was captured on Attu, Alaska and, in 1943, was the first Japanese tank to be brought to Aberdeen" (Ordnance Museum Guide CD and Tank Data, 127).

⁵¹ Captured by the Germans and used until lost in the North African campaign, then shipped to the U.S. via reverse lend-lease scrap shipments in 1943 and diverted for the Ordnance Museum from Brooklyn, N.Y." (Ordnance Museum Guide CD, as well as Tank Data, 5). Formerly at the US Army Ordnance Museum, Aberdeen Proving Ground, MD

⁵² Formerly at Fort Monmouth, N.J., July 14.

⁵³ "K-K-K-Katy" . The first FT-17 sent by France to the United States to serve as the basis for M1917 licensed production, according to Hayes Otoupalik (2/2007). The tank is named after the popular World War I era song by Geoffrey O'Hara.

⁵⁴ Sold to the Egyptians about 1960 and captured by the Israelis during the 1967 Six-Day War. The Israelis removed the engine from the damaged vehicle and made some modifications prior to installing it as a fixed emplacement on the Bar Lev Line. A T-54 engine deck was installed and other repairs were made, like installation of a dummy rear left sprocket, before it was given to the US as a gift (Ordnance Museum Guide CD).

⁵⁵ Fahrgestell number 323814 (Rene Martinez), it has been captured at a Skoda Factory in Plzen, Czech Republic (USA AFVs register). The tank has been restored and repainted recently in a "particular" (experimental?) camouflage scheme. This paint is said to fit to the original factory layer of paint done in 1945 at the Skoda factory. Original remains of these scheme and colors have been found during the restoration when the paint was stripped away.(http://www.twenot.nl/ forum, AFV News forum)

⁵⁶ Named "Agrippa"

¹⁷⁴ Former range hulk, Removed for recovery training use?

¹⁷⁵ The M4A1 is not SN 525. It is a number related to the hull only, the 525th hull cast by Continental-Hubbard factory. From Joe DeMarco: The SN number of the Chino is unknown, since it doesn't have its dataplate. However, it has the loose build number 786 stamped in to the side of the hull in the rear. I think it was assumed that that was the tank's SN number, & that is how it came to get the USA Number 3015543. As best I can determine, 786 means that it was the 786th Pressed Steel Car cast hull. (They were making welded hull M4s at the same time.) If I'm correct, that tank would have been accepted in January, 1943, and the SN Number would have been in the 110XX range, & the USA Number would have been in the 30160XX range.

²³² It's a Frankentank. M4A3(76)HVSS with an M34A1 rotor shield. Don't know where someone came up with the idea that that is / was a Flamethrower. Was built as an M4A3(105)HVSS, so the 76mm turret has probably been added after WW2. (Joe deMarco).

²⁸⁶ A M4 small hatch hull with a T23 turret. On the turret there is an experimental AAI model 108 cupola from a T54/T54E2 turret. The hatch pivots to the side instead of up and back (Joe D Afv discussion Board 02/2014). The hatches and MG ball mount on the front glacis are not original. I think that the front was cut open, maybe for agricultural use. The museum probably had to reconstruct part of the front hull to display the tank (P-O Buan).

The turret is probably the one sent by Great Britain to the United States in 1944/1945 (along with a sister sent to Canada) and originally mounted on an M4A3 Sherman for test by the AGF Board and the Ordnance Department, according to Mark Hayward, Sherman Firefly (Essex, England: Barbarossa Books, 2001), p 145, 153 and David Fletcher, Military Ordnance Special No. 19 Sherman VC M4A4 Firefly (Darlington, MD.: Darlington Productions, 1997). ⁵⁷⁴ Missing mantlet & gun

⁵⁷⁵ "4th Armored Division General Sherman Tank Knocked Out During the Battle of the Bulge Dec. 16 1944 - Jan.23 1945" is painted on the (4 inch?) slabs of (German?) armor welded on the hull sides. Battle of the Bulge casualty seems doubtful in that the up-armoring process didn't commence until February. The glacis armor was taken directly from another Sherman, complete with hull lifting rings as well as headlamp and gun travel lock fittings. According to Joe DeMarco, with no prospect of further deliveries of Jumbos, in February 1945, the Third Army embarked on a program to "up-armor" its M4A3(76)s (P-O Buan).

⁷⁴⁵ This is one of the few places where they actually have a power plant co located with a tank, and outdoors at that. Without trying to sound like a nitpicker, that engine/transmission combo is not for an M60 (A0). The engine is an AVDS-1790-2DA and the transmission is fitted with Hydro-mechanical brakes on the output shafts. It's a 2DA engine based on the 300 amp air cooled generator, easily identified by the air ducting running to the forward part of the engine from it. The large oil coolers, electrical harness connectors and starter relay located on top of the engine make it a "D" model with this generator. The tubing running from the exhaust stacks along the top of the oil coolers is for the VEDES system (Vehicle Exhaust Dust Ejection System). The "A" in 2DA is for VEDES equipped. These particular engines were installed in late model M60A1 RISE Passives, M728A1 CEV's and M60A1 AVLB's. M60A0's had only Mechanical brakes and were never issued with the VEDES system. The tank itself has the earlier aluminum air cleaner units too, only the armored units were equipped with VEDES. The Kansas National Guard never had M60A1's, they went from M60A0 to M60A3's. Most likely this pack came from an M60A1AVLB or M728A1 CEV, since they were in the inventory long after the M60's were retired (Joe_D Afv Discussion Board, 02/2015).

⁷⁵⁹ The tank, donated by the Anniston Army Depot in Anniston Ala. through the U.S. Center for Military History, is planned to be converted to an amphibious "duplex drive" model that linked up with the division following its occupation of Utah beach on D-day. It is scheduled to serve as a centerpiece for a diorama at the post's forthcoming Wings of Liberty Museum (http://www.fortcampbellcourier.com/news/article_b242f33c-b319-11e4-92f4-fb32dcd829a7.html).

⁹⁵⁰ This tank is definitely an odd ball. Hull has small drivers hatch and does not have the turntable opening for the M24IR driver's night sight. All M103's had the night sight, part of BII. Makes her one of the early T43/43E1 tanks that didn't get upgraded to M103 standards. RN number is bogus, missing a digit and all wrong. Shame, might help ID her. Of the initial batch of T43E1's all but 6 were converted to M103. The remaining 6 we kept for testing. Some hulls were used for experimental turrets like the T57 and T58. Others for testing upgrades to automotive and turret improvements eventually for use in M103A1 and A2 Tanks. Based on these pictures I'd bet the hull was one of those 6 and eventually was used to test the AVDS-1790 set up used in the M103A2. The turret looks like an M103A1. Cupola and lack of searchlight fittings indicate so, but with these pictures I can confirm it's not an M103A2. The bulge located under the turret bustle where the gunner was originally located in the M103 is complete. When they converted M103's to A1's they moved the gunner forward but the bulge remained. When upgraded to M103A2 standards they had to cut part of the bulge off and plate it over in order for it to clear the newer, higher rear deck. This one isn't cut. Just wish I had a better image of the sight housing opening and top of turret. There is an odd chance this tank started off as a T43E1, then was used to make one of the pilot T43E2/M103A1's, then eventually was used to test the M103A2 diesel setup. Also could be they stuck this excess M103A1 turret on this hull that was used for all sorts of experiments. That's the problem with the standard 85" turret ring. You can plop any turret with the same diameter on it for display, Covers M48's all the way to M1A2SEP version whatever. JoeD, Afv Discussion Board, 09/2013

¹⁵⁵⁶ Former M60A1 SN 4018. GEN 2 hull with large escape hatch and late casting A1 turret. Someone had stenciled a bogus USMC registration number (579008) on the side. This tank was a former National Guard vehicle before retirement and had all the usual late model Anniston features to include the M68A1 105mm gun and forward thermal shroud as initially used on the M1. Also had modified torsion bar anchor plugs fitted with grease zerks. Typical late MWO done at MATE sites (Joe_D, Afv Discussion Board, 02/2015).
